

Automotive Testing

We provide a wide range of turnkey telemetry systems to measure physical parameters on rotating components e.g.:

- Torque on drive shafts and cardan shafts
- Temperature, force and torque inside transmissions, gear drives and piston engines
- Temperature in brakes, clutches, automatic transmissions and tires
- Rotational vibration of dampers and power train components
- Forces and moments on wheels (telemetry for wheel force transducers)

Systems of highest reliability for use in applications with severe operating conditions

Suitable for R&D, Component Test Stands, Dynamometers as well as Test Track applications

Torque measurement on cardan shafts

Torque measurement in gearbox shafts

6-component wheel force transducer with telemetric data transmission

8-channel temperature measurement in an automatic transmission

Single channel telemetry transmitter for drive shaft installation
