

Process Monitoring

Advanced turnkey telemetry systems for monitoring of physical parameters on rotating components of production machinery e.g.

- Torque and temperature on agitators
- Torque on extruders
- Tractive force on stranding machines
- Temperature on rotating kilns, industrial dryers and ball mills
- Power on process gas compressors and pumps
- Torque on automated bolting tools
- Torque on rolling mills
- Force in roller bearings for paper machines

Reliable telemetry systems for permanent use in severe industrial applications with extreme operating conditions

Suitable for Process Monitoring, Process Control, Quality Assurance and Condition Monitoring

Torque monitoring on automated track laying machine

Temperature monitoring on rotating kiln

8-channel tractive force measurement on stranding machine

Instrumented roller to measure load in large roller bearings of paper machines
